490	jīn	金	metal	Bernifal
507	wǔ	五	everywhere	Glozel
516	dīng	丁	population	Mazet
521	xīn	辛	manual labour	Bayol

Shuowen Jiezi Radicals found by the Cave Script Translation Project

Notes:

1. The Shuowen Jiezi index number is taken from Shuowenjiezi: research tool in Chinese traditional philology: <http://www.shuowenjiezi.com/>
2. For the sake of simplicity, one pinyin name has been listed for each character. A character may have more than one name, and different sources will use different names to refer to the same character.
3. The character forms were chosen because they are available in Unicode. They do not necessarily correspond to the archaic forms found by the CS Project.
4. The correct English translation depends upon the context. Only one possible translation is given here.
5. One example of the location of each radical is given in this table. Some radicals are found in several different locations.
6. Only radical number 100 appears on the Lorthet baton. However, radical number 100 is clearly derived from radical number 99. Our ancestors must have used both characters. I have therefore included both characters in the table.
7. My interpretation. I have not found a modern equivalent with this meaning.
8. Radical number 377, quǎn is normally translated as dog. This is my best guess for the link with the symbol for prisoner at Chauvet and Bayol. The symbol for captive or prisoner can be seen on what is known as 'The Hunting Party Jade' (my translation) from Sanxingdui, to be found in the Shinegood Culture Gallery 上古文化, Xiamen, China. I therefore conclude that the symbol was being used to mean captive 3,000 years ago, but that somewhere in history it ceased to be used for captive people.

Radical number 77, zuǒ 𠂇, meaning left, looks a bit like the captive symbol, but I have not found a reason to link the two.
